

BHL SOFTWARE

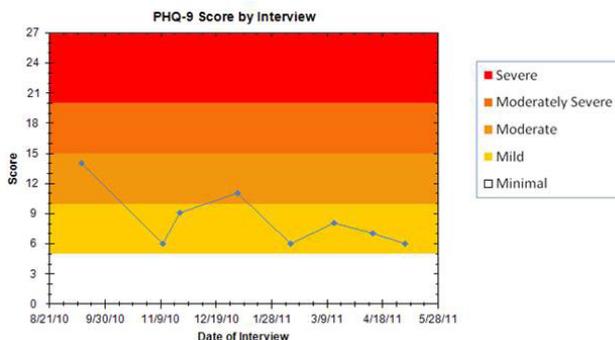

Technology Advancing the Delivery of Measurement-Based Mental Health Care

The BHL Software Package provides a flexible and user-friendly tool to facilitate the delivery of measurement-based mental health care. The software provides a mechanism for tracking patients over time, monitoring patients' symptoms and accessing patient and program level data.

Key features

- Ideal for mental health services integrated into primary care
- Supports measurement based care in many settings
- Offers customizable decision support
- Creates progress notes & patient materials
- Provides a tool for patient tracking & panel management
- Improves access to workload & clinical outcome data
- Interfaces with electronic health record (EHR) systems

Tracking Patients' Symptoms Over Time:

Sample graph generated from the software for patients to view their progress

BHL SOFTWARE

Technology Advancing the Delivery of Measurement-Based Mental Health Care
