MIRECC Activities Support VHA Blueprint for Excellence

Strategy 2: Deliver high quality, veteran centered care that compares favorably to the best of private sector in measured outcomes, value, access and patient experience.

Coaching into Care ★
Providing education and support to empower family members/friends of Veterans to get them into care.

Online Parenting Course ★
Serving Veterans through web-based mental health services.

HOME Project ★
Serving at-risk Veterans at home and in rural areas.

Developing Case Finders ★
Identify at-risk Veterans who may not present through other VA outreach efforts and care delivery.

Mobile Technologies ★
Serving homeless, rural & returning Veterans to improve their mental health and reduce health risks.

National MH & Chaplaincy Program ★
Serving Veterans through partnerships between chaplains and mental health providers.

Veteran Health & Needs Assessment ★
Serving OEF/OIF/OND Veterans by identifying treatment preferences and barriers to care.

Practice Based Implementation ★
Serving Veterans by identifying facilitators to mental health practice changes.

MH Summits - VISM 6 & National ★
Serving Veterans through partnerships with community agencies and providers in support of VISM 6 MH Summits and leading national evaluations of MH Summits to provide guidance for national policy.

Director's Update: Welcome to new Deputy Director

The VISM 6 MIRECC’s national search for a Deputy Director has concluded successfully. I am pleased to announce that Dr. Mira Brancu accepted the Deputy Director position, officially transitioning on March 22. Mira is working with me and others within the MIRECC to implement a phased and thoughtful transition from her previous responsibilities as Managing Director of the OEF/OIF/OND Post-Deployment Mental Health Study, Data Warehouse and Biorepository. Please join me in congratulating and thanking Mira for taking on this new role in service to the mission of the VISM 6 MIRECC to improve the post-deployment mental health of our Nation’s Veterans.

John A. Fairbank, Ph.D. Director, Mid-Atlantic (VISM 6) MIRECC

Focus on the VISM
Study featured by MH Services in a Cabinet Report!
When it first launched its mission to identify, promote and study best practices in deployment mental health, the Veterans Integrated Service Network (VISM) 6 Mental Illness Research, Education and Clinical Center (MIRECC) team decided to ask Veterans what they wanted from VA rather then tell them what the experts thought they needed. The April 2015 edition of the Journal of Traumatic Stress will include a scientific report on a VISM 6 MIRECC survey of Veterans of Iraq and Afghanistan who were users or non-users of mental health services within VA or community systems and who also reported significant symptoms of PTSD. The goal was to learn what these Veterans most wanted from VA and to understand any concerns that might keep them from seeking care.

Veterans reported concerns about the kind of PTSD treatment they might receive at VA and about the stigma associated with reporting a mental health problem, but an important study finding was that the primary reason why Veterans with significant symptoms of PTSD chose not to seek mental health care was their concern about the privacy of their medical record.

When asked what they most wanted from VA, their top choice (endorsed by 91.0% of participants) was for assistance with their VA benefits. This finding supports plans for the new MyVA program designed to ensure that every Veteran can engage all aspects of VA service (healthcare, benefits and cemetery services) at any VA point of contact. Those Veterans who were already engaged in mental health care reported a strong desire for family services and for help with particular PTSD symptoms. Severity of PTSD symptoms drove help-seeking and many participants communicated preferences for care that would address physical problems as well. This supports VA's efforts to address mental health issues in Primary Care settings where Veterans can be engaged on both levels without having to make a special "Mental Health" appointment (thus side-stepping any associated stigma).

Based on these findings, the authors suggest that VA undertake a novel outreach/education program addressing existing privacy protections, benefits questions, treatment options and family services in order to best engage Veterans with PTSD symptoms who served in Iraq or Afghanistan.

Focus on the VISN
Leadership Activities

Two of our faculty have accepted invitations to serve on their VA's R&D committee. Dr. John Fairbank (MIRECC Director) is joining the Durham R&D committee and Dr. Scott McDonald (MIRECC Fellowship Director, Richmond) is joining the Richmond R&D committee.

Dr. McDonald also now serves on the VA/DoD Evidence-Based Clinical Practice Guidelines (CPG) for the Management of Concussion-Mild Traumatic Brain Injury Work Group and the APA Division 22 (Rehabilitation Psychology) Science Committee.

Dr. Rajendra Morey (MIRECC Neuroimaging) has been appointed to lead the Neuroimaging Workgroup within the Psychiatric Genetics Consortium for PTSD. This Consortium has brought together over 35,000 samples from across the world to conduct a PTSD genome-wide association study (GWAS). Within this larger effort, Dr. Morey has organized the neuroimaging-genetics group. This now includes 12 sites with over 4,500 datasets, the largest neuroimaging-genetics effort in PTSD to date.

MIRECC Faculty Honored

Dr. Jean Beckham (MIRECC Co-Associate Director, Research) has been awarded Duke University School of Medicine's Research Mentoring Award. She was nominated by a group of past and current mentees across VA and academic institutions, all of whom wrote glowing letters of nomination. She is an amazing mentor, and it's wonderful that her contributions to future generations of researchers are being acknowledged!

Strategy 8: Support innovation in health services through academic affiliations, information exchange, intergovernmental, public private, and community based initiatives.

★ Research Collaborations ★
77%+ research studies involve academic, DoD, clinical, medical center, and other collaborations including:
- Strong, productive collaborations among VISION 6 MIRECC investigators and faculty at affiliate universities.
- Supporting the National Research Action Plan through Chronic Effects of Neurotrauma Consortium research.
- Partnering with DoD.
- Collaborating partner in innovative National PTSD Genetics Consortium.

★ Education Collaborations ★
- CBOC Mental Health Rounds (online) in collaboration with VISN 16 MIRECC.
- Online Parenting Course for Service Members & Veterans in collaboration with DoD and multiple VA partners.
- Mental Health & Chaplaincy multi-site educational collaboration with DoD.
- “Treating the Invisible Wounds of War” trainings with AHEC and CSSP.

★ Practice Improvement Collaborations ★
- Practice-Based Implementation Network collaboration with NC-PTSD.
- HOME Project collaboration with VISN 16, MHS, ORH, and local suicide prevention and MH teams.
- TBI CPG - extensive participation in VHA’s development and ongoing management of the TBI assessment/treatment system of care.

★ Outreach Collaborations ★
- North Carolina Vet-to-Vet with state & Veteran organizations; NC Governor’s Working Group on Veterans, Service Members, and Their Families.

Online Training Resources for Veterans
http://www.veterantraining.va.gov/

There are several free and anonymous on-line education and life coaching programs that use interactive exercises and video demonstrations to teach skills for overcoming life challenges such as relationship and parenting problems, financial hardship, and re-adjustment issues.

Moving Forward - Overcoming Life’s Challenges
Moving Forward is an educational and life coaching program that teaches Problem Solving skills to help you better handle life’s challenges.

Parenting for Service Members & Veterans
This on-line course provides parents with tools that strengthen parenting skills and helps them reconnect with their children.

PTSD Coach Online
PTSD Coach Online is for anyone who needs help with upsetting feelings. Trauma survivors, their families, or anyone coping with stress can benefit.
