Program Description: Risk management is a necessity of mental health practice and this requires a thoughtful approach to suicide risk assessment and management. Even prior to COVID-19, VHA committed significant resources towards web-based versions of evidence-based psychotherapies as a means of increasing access to care. These include interventions aimed at insomnia (Path to Better Sleep, CBT-I); and, managing stress (Moving Forward, Problem Solving Therapy). Both are also useful upstream suicide prevention interventions. Efforts are underway to develop a new web-based program to serve as a downstream suicide prevention intervention based on VA/DOD Clinical Practice Guidelines. This virtual knowledge-based webinar training will inform attendees and healthcare teams through discussion on the current state of the science, and present VHA digital resources, with the goal of increasing their use.

Date / Time: February 9, 2021 at 12:00 p.m. to 1:00 p.m. ET

Location: Your workstation or local viewing site to access Adobe Connect.
