The Self-Directed Violence Classification System (SDVCS)

What it is and why it matters

Bridget B. Matarazzo, Psy.D.

VISN 19 Mental Illness Research Education and Clinical Center;
University of Colorado, School of Medicine, Department of Psychiatry

Developed in collaboration with the Centers for Disease Control and Prevention
Presentation Overview

• Brief Introduction
• Background Information
• Development of the SDVCS
• Using the SDVCS
• Vignettes
• Q & A
A Brief Introduction to the Epidemiology of Suicide and Veteran Suicide Studies
Epidemiological Trends
Suicide in the U.S. (2000-2006)

U.S. average suicide rate = 11/100,000
Epidemiological Trends
Suicide in the U.S. (2000-2006)

U.S. average suicide rate = 11/100,000
Facts about Veteran Suicide

• ~34,000 US deaths from suicide/ year.
  – Centers for Disease Control and Prevention

• ~20% are Veterans.
  – National Violent Death Reporting System

• ~18 deaths from suicide/day are Veterans.
  – National Violent Death Reporting System

• ~ 5 deaths from suicide/day among Veterans receiving care in VHA.
  – VA Serious Mental Illness Treatment, Research and Evaluation Center

• No evidence for increased rates in OEF/OIF Veterans relative to sex, age, and race matched people in the population as a whole.
  – VA Office of Environmental Epidemiology
Facts about Veteran Suicide

• More than 60% of suicides among utilizers of VHA services are among patients with a known diagnosis of a mental health condition
  – Serious Mental Illness Treatment Research and Education Center

• Before enhancements, rates in facilities depended upon the quality of mental health services
  – Office of Mental Health Services

• Veterans are more likely to use firearms as a means.
  – National Violent Death Reporting System

• ~1000 attempts/month among Veterans receiving care in VHA as reported by suicide prevention coordinators.
  ~8% repeat attempts with an average of 3 months follow-up
  ~0.45% deaths from suicide in attempters with an average of 3 months follow-up
  ~30% of recent suicides have a history of previous attempts
  – VA National Suicide Prevention Coordinator
In 2008, former Secretary of Veterans Affairs, Dr. James B. Peake, recommended a standard nomenclature for “suicide” and “suicide attempts” to improve Veterans Affairs’ (VA):

1. Suicide prevention programs
2. Suicide prevention research
3. Suicide prevention education
Suicide Prevention: Basic Strategy

• Basic Strategy
  – Suicide prevention requires ready access to high quality mental health (and other health care) services
  
  – Supplemented by programs designed to:
    
    – Help individuals & families engage in care
    
    – Address suicide prevention in high risk patients.
Specific Initiatives Established for Suicide Prevention

- Hubs of expertise
  - CoE
  - MIRECC
- National programs for education and awareness
  - Operation S.A.V.E
  - Suicide Risk Management Training for Clinicians
  - TBI and Suicide
  - Women Veterans and Suicide (in development)
- **24/7 Crisis Line, 1-800-273-TALK (8255), Push #1**
  - Veterans Chat
- Suicide Prevention Coordinators (SPC)
- Federal partnerships
Self-Directed Violence Classification System Training

**Objective:** to learn and begin using a new nomenclature for self-directed violence

**Training Overview**

- Review of the language of suicidology
- Rationale for a self-directed violence classification system
- Implementation of a new classification system
A Brief History of the Development of a Nomenclature and Classification System
A healthy 24-year-old female Veteran is brought by her boyfriend to the Emergency Department after she ingested all remaining pills in a bottle of regular strength Tylenol. She estimates there were 4 to 6 pills total in the bottle (1300-1950 mg total dose), and she reports no ill effects. Lab tests done at the time of admission to the ED reported her acetaminophen level within the therapeutic range. During triage, she states that before she took the pills she was upset from arguing with her boyfriend and just wanted to die. She feels better now and requests to go home.
What is the Behavior?

Gesture?
Threat?
Acting Out/Manipulation?
Attempt?
Other?

What criteria did you use to decide?

- Lethality of method?
- Expressed intent?
- Number of pills ingested?
- Lab results?
- Other?
The Language of Self-Directed Violence
Identification of the Problem

- Suicidal ideation
- Death wish
- Suicidal threat
- Cry for help
- Self-mutilation
- Parasuicidal gesture
- Suicidal gesture
- Risk-taking behavior
- Deliberate Self-Harm
- Non-Suicidal Self Injury
- Suicidal Gesture

- Self-harm
- Self-injury
- Suicide attempt
- Aborted suicide attempt
- Accidental death
- Unintentional suicide
- Successful attempt
- Completed suicide
- Life-threatening behavior
- Suicide-related behavior
- Suicide
The Language of Self-Directed Violence
Why Does It Matter?

“A rose is a rose is a rose is a rose”

“What’s in a name? that which we call a rose
By any other name would still smell as sweet”

EXCEPT IN THE FIELD OF SUICIDOLOGY:
WHERE a Suicide Attempt (by one person’s assessment)
IS NOT ALWAYS a Suicide Attempt (by another’s)?
The Problem...

• The field of suicidology is challenged by the lack of conceptual clarity about suicidal behaviors and a corresponding lack of well-defined terminology.

  - In both research and clinical descriptions of suicidal acts.

• There is a great variability of terms referring to the same behaviors (e.g., threat, gesture). Terms are often pejorative and based on incorrect notions about seriousness and lethality of methods (e.g., manipulative, non-serious, etc).
Hence......

It becomes very difficult to:

• Accurately count the number of suicides and suicide attempts that occur annually
• Accurately differentiate suicide attempts from non-suicidal self-injuries
• Conduct longitudinal studies of suicide attempters
• Communicate between and among clinicians, researchers, patients, and patients’ families
• Establish suicide and suicide attempts as a major public health problem that warrants investment of resources
The Language of Self-Directed Violence
Implications of the Problem

- Clinical
- Research
- Public Health (e.g., surveillance)
- Public Policy
Example 1.

**ABSTRACT**

**Background.** Psychiatric emergency room (ER) patients are thought to be at increased risk of suicide. The prevalence and characteristics of suicidal behavior in a recent sample of patients who came to the ER for psychiatric evaluation were examined.

**Methods.** Charts of 311 consecutive psychiatric ER patients were reviewed. Suicidal behavior was considered present if current suicidal ideation or attempts within 24 hours of or during the emergency evaluation were noted in the chart.

**Results.** Suicidal behavior was present in 38% of the psychiatric ER patients. Younger age, white race, affective disorders in female patients, and substance abuse disorders in male patients were features of the suicidal group. Sex of the patient was not associated with suicidal behavior.

**Conclusions.** Suicidal behavior is prevalent in the psychiatric ER. Effective suicide prevention in this setting will hinge on finding more specific risk factors.

(Dhossche, 2000)
Current Terminology
Research Implications of the Problem

Example 2.

*Introduction*

Suicide prevention has been at the forefront of mental health strategy for some years \[1,2\]. Effective management of deliberate self-harm (DSH) patients must be an important element in any suicide prevention policy \[3\]. This is because of the significant risk of completed suicide following deliberate self-poisoning or self-injury \[4–7\] and the fact that approximately half of all suicides in the United Kingdom have a history of DSH \[8,9\].

(Hickey, Hawton, Fagg, & Weitzel, 2001)
Consequences of Ill-Defined Terms

• Makes interpreting the meaning of self-injurious acts more difficult and hampers precise communication on individual or population basis

  – Some Self-injurious acts that should be classified as suicidal may be mislabeled

  – Other types of Self-injurious acts may be inappropriately classified as suicidal
The Need for Consistent Definitions & Data Elements

“Research on suicide is plagued by many methodological problems... Definitions lack uniformity ... reporting of suicide is inaccurate...”

(Reducing Suicide: A National Imperative, Institute of Medicine, 2002)
### 15 Definitions of Suicide

<table>
<thead>
<tr>
<th>Definitions</th>
<th>Source</th>
<th>Year</th>
</tr>
</thead>
<tbody>
<tr>
<td>All cases of death resulting directly or indirectly from a positive or negative act of the victim himself, which he knows will produce this result.</td>
<td>Emile Durkheim</td>
<td>1897/1951</td>
</tr>
<tr>
<td>Suicide is (1) a murder (<em>selbstmord</em>) (involving hatred or the wish-to-kill), (2) a murder by the self (often involving guilt or the wish-to-be-killed), and (3) the wish-to-die (involving hopelessness).</td>
<td>Karl Menninger</td>
<td>1938</td>
</tr>
<tr>
<td>All behavior that seeks and finds the solution to an existential problem by making an attempt on the life of the subject.</td>
<td>Jean Baechler</td>
<td>1975</td>
</tr>
<tr>
<td>Suicide is a conscious act of self-induced annihilation, best understood as a multi-dimensional malaise in a needful individual who defines an issue for which suicide is perceived as the best solution.</td>
<td>Edwin S. Shneidman</td>
<td>1985</td>
</tr>
<tr>
<td>An act with a fatal outcome which the deceased, knowing or expecting a fatal outcome, had initiated and carried out with the purpose of provoking the changes he desired.</td>
<td>World Health Organization</td>
<td>1986</td>
</tr>
<tr>
<td>A fatal willful self-inflicted life-threatening act without apparent desire to live; implicit are two basic components—lethality and intent.</td>
<td>Joseph H. Davis</td>
<td>1988</td>
</tr>
<tr>
<td>Death, arising from an act inflicted upon oneself with the intention to kill oneself.</td>
<td>Mark L. Rosenberg et al.</td>
<td>1988</td>
</tr>
<tr>
<td>Death from injury, poisoning, or suffocation where there is evidence (either explicit or implicit) that the injury was self-inflicted and that decedent intended to kill himself/herself.</td>
<td>Centers for Disease Control (OCDS definition)</td>
<td>1988</td>
</tr>
<tr>
<td>Self-initiated, intentional death. The definition of suicide has four elements: (1) a suicide has taken place only if a death occurs, (2) it must be of one’s doing, (3) the agency of suicide can be active or passive, and (4) implies intentionally ending one’s own life.</td>
<td>André Ivanoff, David J. Mayo</td>
<td>1989/1992</td>
</tr>
<tr>
<td>Suicide is, by definition, not a disease, but a death that is caused by a self-inflicted intentional action or behavior.</td>
<td>Morton Silverman &amp; R. Maris, World Health Organization</td>
<td>1995/1998</td>
</tr>
<tr>
<td>The act of killing oneself deliberately initiated and performed by the person concerned in the full knowledge or expectation of its fatal outcome.</td>
<td>S. K. Goldsmith, T. C. Pellmar, A. M. Kleinman, W. E. Bunney Institute of Medicine</td>
<td>2002</td>
</tr>
<tr>
<td>Death from injury, poisoning, or suffocation where there is evidence that a self-inflicted act led to the person’s death.</td>
<td>Diego DeLeo et al.</td>
<td>2004</td>
</tr>
<tr>
<td>Fatal self-inflicted self-destructive act with explicit or inferred intent to die. Multiaxial description includes: Method, Location, Intent, Diagnoses, and Demo-graphics.</td>
<td></td>

Synonyms for Suicide

- Committed Suicide
- Completed Suicide
- Failed Attempt
- Fatal Repeater
- Fatal Suicide
- Fatal Suicide Attempt
- Hastened Death
- Intentional Self-Murder
- Intentional Suicide
- Lethal Suicide Attempt
- Rational Suicide
- Self-Inflicted Death
- Self-Murder
- Self-Slaughter
- Sub-intentional Death
- Suicide Victim
- Successful Attempt
- Successful Suicide
- Unintentional Suicide
9 Definitions of Non-fatal Self-Harm

TABLE 2  
Some Alternative Definitions of Nonfatal Self-Harm Behaviors

WHO/EURO Multicentre Study on Parasuicide (Platt et al., 1992)
An act with nonfatal outcome, in which an individual deliberately initiates a nonhabitual behavior that, without intervention from others, will cause self-harm, or deliberately ingests a substance in excess of the prescribed or generally recognized therapeutic dosage, and which is aimed at realizing changes which the subject desired via the actual or expected physical sequences.

O’Carroll et al. (1996) Definition of Suicide Attempt
A potentially self-injurious behavior with a nonfatal outcome, for which there is evidence (either explicit or implicit) that the person intended at some (nonzero) level to kill himself/herself. A suicide attempt may or may not result in injuries.

National Strategy for Suicide Prevention (2001) Definition of Suicide Attempt
A potentially self-injurious behavior with a nonfatal outcome, for which there is evidence that the person intended to kill himself or herself; a suicide attempt may or may not result in injuries.

Goldsmith et al. (2002) Definition of Suicide Attempt
A nonfatal, self-inflicted destructive act with explicit or inferred intent to die. (Note: important aspects include the frequency and recency of attempt(s), and the person’s perception of the likelihood of death from the method used, or intended for use, medical lethality, and/or damage resulting from method used, diagnoses, and demographics.)

Hawton et al. (2003) Definition of Deliberate Self-Harm

DeLeo et al. (2004) Definition of Nonfatal Suicidal Behavior (with or without injuries)
A nonhabitual act with nonfatal outcome that the individual, expecting to, or taking the risk, to die or to inflict bodily harm, initiated and carried out with the purpose of bringing about wanted changes.

AAS/SPRC (2006) Definition of Suicide Attempt
A potentially self-injurious behavior with a nonfatal outcome, for which there is evidence that the person had the intent to kill him/herself, but failed, was rescued or thwarted, or changed one’s mind. A suicide attempt may or may not result in injuries.

Intentional self-injurious behavior where there is no evidence of intent to die. DSH includes various methods by which individuals injure themselves, such as self-laceration, self-battering, taking overdoses, or exhibiting deliberate recklessness.
Synonyms for Suicide Attempt

- Aborted Suicide Attempt
- Attempted Suicide
- Cry for Help
- Death Rehearsals
- Deliberate Self-Harm
- Failed Attempts
- Failed Completion
- Failed Suicide
- Instrumental Suicide-Related Behavior
- Near Lethal Self-Harm
- Near Miss Attempt
- Non-Fatal Suicide-Related Behavior
- Non-Fatal Self-Harm Behavior
- Non-Lethal Self-Injurious Act
- Non-Suicidal Self-injury
- Parasuicide
- Risk-Taking Behavior
- Self-Assaultive Behavior
- Self-Destructive Behavior
- Self-Harm Behavior
- Self-Inflicted Behavior
- Self-Injurious Behavior
- Suicidal Episode
- Suicidal Manipulation
- Suicidal Rehearsal
Suicidality
What does this term actually mean?
What behaviors are included in this term?

- State of being Suicidal?
- Suicidal Proneness?
- Suicidal Motivation?
- Suicidal Intentionality?
- Suicidal Proclivity?
- Suicidal Ideation?
- Suicidal Intent?
- Suicidal Gesture?
- Suicidal Threat?
- Suicide-Related Thoughts?
- Suicide-Related Behavior?
“Unacceptable Terms”

- Attempted Suicide
- Completed Suicide
- Committed Suicide
- Failed Attempt
- Failed Completion
- Fatal Suicide Attempt
- Parasuicide

- Nonfatal Suicide Attempt
- Nonfatal Suicide
- Successful Suicide
- Suicidality
- Suicide Threat
- Suicide Victim
- Suicide Gesture
- Manipulative Act
The Language of Self-Directed Violence
A Solution to the Problem

NOMENCLATURE

CLASSIFICATION SYSTEM
The Language of Self-Directed Violence
A Solution to the Problem

Nomenclature (def.) - a set of terms that are:

• Commonly understood
• Widely acceptable
• Comprehensive

These terms:

• Define the basic clinical phenomena (of suicide and suicide-related behaviors)
• Are based on a logical set of necessary component elements that can be easily applied

(Silverman, 2006)
What is the Purpose of a Nomenclature?

- enhance clarity of communication
- have applicability across clinical settings
- be theory neutral
- be culturally neutral
- use mutually exclusive terms that encompass the spectrum of thoughts and actions
What is a Classification System?

Essential Features

- Builds upon a nomenclature (e.g., terminology)
- “Exhaustive” categorization and breakdown of subtypes of related behaviors (e.g., covers all possibilities)
- Further differentiates amongst phenomena that appear to be similar by use of modifiers

(Silverman, 2006)

Beyond the Tower of Babel: A Nomenclature for Suicidology

Patrick W. O’Carroll, MD, MPH, Alan L. Berman, PhD, Ronald W. Maris, PhD, Eve K. Moscicki, ScD, MPH, Bryan L. Tanney, MD, and Morton M. Silverman, MD

Suicidology finds itself confused and stagnated for lack of a standard nomenclature. This paper proposes a nomenclature for suicide-related behavior in the hope of improving the clarity and precision of communications, advancing suicidological research and knowledge, and improving the efficacy of clinical interventions.

\(^x\)Conscious intent to ends one's life through the suicidal behavior.

\(^5\)Note that a fatal outcome of instrumental behavior is properly considered accidental death, since by definition there is no intent to die from suicide.

Development of the SDVCS
Response to The Blue Ribbon Panel

- VISN 19 MIRECC’s collaboration with Silverman, et al.
- Development of a clinically feasible system, based on research, theory, and clinician feedback
- Collaboration with the CDC
- Pilot testing at VA and non-VA sites
- Testing of Feasibility via QUERI Phase I Rapid Response Project
Why “Self-Directed Violence”? 

Blue Ribbon Task Force recommendation was to work with CDC and other federal agencies on the development of a nomenclature and classification system.

CDC was already developing a Self-Directed Violence Surveillance System that included Uniform Definitions and Recommended Data Elements.

The opportunity presented itself for the VHA, DoD, and CDC to adopt the same nomenclature and classification system.
Violence is the intentional use of physical force or power, threatened or actual, against oneself, another person, or against a group or community, which results in or has a high likelihood of resulting in injury, death, psychological harm, maldevelopment, or deprivation. (Source: World Health Organization)
SELF-DIRECTED VIOLENCE SURVEILLANCE
UNIFORM DEFINITIONS AND RECOMMENDED DATA ELEMENTS

National Center for Injury Prevention and Control
Division of Violence Prevention
CDC Flowchart for surveillance definitions for self-directed violence

Self-directed violence (SDV)

Suicidal self-directed violence
- Fatal (suicide)
  - Suicidal SDV with or without injury e.g., Interrupted (by self or by another)
  - Other suicidal behavior e.g., Preparatory
- Non-fatal

Undetermined self-directed violence
- Fatal
- Non-fatal
  - Undetermined SDV with or without injury e.g., Interrupted (by self or by another)
  - Other undetermined SDV e.g., Preparatory
- Fatal
- Non-fatal
  - Non-suicidal SDV with or without injury e.g., Interrupted (by self or by another)
  - Other non-suicidal SDV e.g., Preparatory

Suicidal Intent: There is past or present evidence (implicit or explicit) that an individual wishes to die, means to kill him/herself, and understands the probable consequences of his/her actions or potential actions. Suicidal intent can be determined retrospectively and in the absence of suicidal behavior.

*The individual* ...

- **COMPONENT 1**: wishes to die
- **COMPONENT 2**: means to kill him/herself
- **COMPONENT 3**: understands the probable consequences (i.e. death)
<table>
<thead>
<tr>
<th>Type</th>
<th>Sub-Type</th>
<th>Definition</th>
<th>Modifiers</th>
<th>Terms</th>
</tr>
</thead>
<tbody>
<tr>
<td>Thoughts</td>
<td>Non-Suicidal Self-Directed Violence Ideation</td>
<td>Self-reported thoughts regarding a person's desire to engage in self-inflicted potentially injurious behavior. There is no evidence of suicidal intent. For example, persons engage in Non-Suicidal Self-Directed Violence Ideation in order to attain some other end (e.g., to seek help, regulate negative mood, punish others, to receive attention).</td>
<td>N/A</td>
<td>•Non-Suicidal Self-Directed Violence Ideation</td>
</tr>
<tr>
<td></td>
<td>Suicidal Ideation</td>
<td>Thoughts of engaging in suicide-related behavior. For example, intrusive thoughts of suicide without the wish to die would be classified as Suicidal Ideation, Without Intent.</td>
<td></td>
<td>•Suicidal Ideation, Without Suicidal Intent</td>
</tr>
<tr>
<td></td>
<td>Preparatory</td>
<td>Acts or preparation towards engaging in Self-Directed Violence, but before potential for injury has begun. This can include anything beyond a verbalization or thought, such as assembling a method (e.g., buying a gun, collecting pills) or preparing for one's death by suicide (e.g., writing a suicide note, giving things away). For example, hoarding medication for the purpose of overdosing would be classified as Suicidal Self-Directed Violence, Preparatory.</td>
<td></td>
<td>•Non-Suicidal Self-Directed Violence, Preparatory</td>
</tr>
<tr>
<td></td>
<td>Non-Suicidal Self-Directed Violence</td>
<td>Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself. There is no evidence, whether implicit or explicit, of suicidal intent. For example, persons engage in Non-Suicidal Self-Directed Violence in order to attain some other end (e.g., to seek help, regulate negative mood, punish others, to receive attention).</td>
<td></td>
<td>•Non-Suicidal Self-Directed Violence, Without Injury</td>
</tr>
<tr>
<td></td>
<td>Undetermined Self-Directed Violence</td>
<td>Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself. Suicidal intent is unclear based upon the available evidence. For example, the person is unable to admit positively to the intent to die (e.g., unconsciousness, incapacitation, intoxication, acute psychosis, disorientation, or death); OR the person is reluctant to admit positively to the intent to die for other or unknown reasons.</td>
<td></td>
<td>•Undetermined Self-Directed Violence, Without Injury</td>
</tr>
<tr>
<td></td>
<td>Suicidal Self-Directed Violence</td>
<td>Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself. There is evidence, whether implicit or explicit, of suicidal intent. For example, a person with a wish to die cutting her wrist with a knife would be classified as Suicide Attempt, With Injury.</td>
<td></td>
<td>•Suicide Attempt, Without Injury</td>
</tr>

When both are present, **Self-Directed Violent Behaviors** trump **Preparatory** for purposes of classification.
Using the Clinical Tool
Self-Directed Violence (SDV) Classification System
Clinical Tool

BEGIN WITH THESE 3 QUESTIONS:
1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful? If NO, proceed to Question 2. If YES, proceed to Question 3.
2. Is there any indication that the person had self-directed violence related thoughts? If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence \( \Rightarrow \) NO SDV TERM
   If YES, proceed to Decision Tree A
3. Did the behavior involve any injury or did it result in death? If NO, proceed to Decision Tree B. If YES, proceed to Decision Tree C

DECISION TREE A: THOUGHTS

Key Terms (Centers for Disease Control and Prevention)

**Self-Directed Violence**: Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself.

**Suicidal Intent**: There is past or present evidence (explicit or implicit) that an individual wishes to die, means to kill him/herself, and understands the probable consequences of his/her actions or potential actions. Suicidal intent can be determined retrospectively and in the absence of suicidal behavior.

**Preparatory Behavior**: Acts or preparation towards engaging in Self-Directed Violence, but before potential for injury has begun. This can include anything beyond a verbalization or thought, such as assembling a method (e.g., buying a gun, collecting pills) or preparing for one's own death by suicide (e.g., writing a suicide note, giving things away).

**Physical Injury** (paraphrased): A bodily lesion resulting from acute overexposure to energy (this can be mechanical, thermal, electrical, chemical, or radiant) interacting with the body in amounts or rates that exceed the threshold of physiological tolerance (e.g., bodily harm due to suffocation, poisoning or overdoses, lacerations, gunshot wounds, etc.). Refer to the Classification System for the Centers for Disease Control and Prevention definition.

**Interrupted By Self or Other**: A person takes steps to injure self but is stopped by self/another person prior to fatal injury. The interruption may occur at any point.

**Suicide Attempt**: A non-fatal self-inflicted potentially injurious behavior with any intent to die as a result of the behavior.

**Suicide**: Death caused by self-inflicted injurious behavior with any intent to die as a result of the behavior.

Reminder: Behaviors Trump Thoughts
CASE EXAMPLE 1: A Veteran comes in for an initial mental health intake. During the intake, the therapist and the Vet have the following dialogue:

Therapist: “Have you had thoughts of suicide?”
Veteran: “There have been times when I’ve thought about it.”
Therapist: “Times? Like recently?”
Veteran: “Yeah, well sometimes those thoughts enter my mind.”
Therapist: “Can you say more about that?”
Veteran: “Well … if you had the pain I have, you might understand.”
Therapist: “You’re telling me that your pain feels unbearable at times?”
Veteran: “Yeah, like yesterday … I thought it would be better if I just went to sleep and never woke up.”
Therapist: “So you wanted to die?”
Veteran: “Yeah, you could say that.”
Therapist: “Did you take any actions to make that happen?”
Veteran: “You mean, like, did I try to kill myself?”
Therapist: “Yes.”
Veteran: “Oh no. I mean I thought about it, but I didn’t do anything. I just took my medication like I always do.”
Therapist: “Your medication?”
Veteran: “Yeah, my pain meds. They usually help the pain pretty well.”
BEGIN WITH THESE 3 QUESTIONS:
1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful? (Refer to Key Terms on reverse side)
   If NO, proceed to Question 2
   If YES, proceed to Question 3
2. Is there any indication that the person had self-directed violence related thoughts?
   If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence \(\rightarrow\) NO SDV TERM
   If YES, proceed to Decision Tree A
3. Did the behavior involve any injury or did it result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

DECISION TREE A: THOUGHTS

```
Were/Are the thoughts suicidal? 

Yes

If the thoughts were/are suicidal, is there evidence of Suicidal Intent? 

Yes

Suicidal Ideation, With Suicidal Intent

No

Suicidal Ideation, Without Suicidal Intent

Unknown

Non-Suicidal SDV Ideation
```

---

**Key Terms**

- **Suicidal Ideation**: Thoughts of ending one's life.
- **Non-Suicidal SDV Ideation**: Thoughts of violent behavior not related to suicide.
CASE EXAMPLE 2: During a therapy session, a therapist and Veteran engage in the following dialogue:

Therapist: “Have you had thoughts of hurting yourself recently?”
Veteran: “I’ve had thoughts like that for several years.”
Therapist: “Can you tell me about some of the thoughts you’ve had since your last visit a week ago?”
Veteran: “I would prefer not to.”
Therapist: “I can respect your right to choose what you want to tell me.”
Veteran: “I just don’t want you to get the wrong idea.”
Therapist: “You seem concerned that I might.”
Veteran: “Well, the last therapist I mentioned anything to put me in the hospital. I don’t want to go through that again.”
Therapist: “That’s understandable. I would certainly like to prevent that if possible. I do, however, want to make sure you’re safe.”
Veteran: “I appreciate that. I think I’m ok.”
Therapist: “You think?”
Veteran: “Well, there was a time last week when I was feeling pretty bad, and I was reading online about ways to kill yourself, but I didn’t do anything. And I don’t plan to do anytime soon.”
Therapist: “I see. When you say you didn’t do anything, you’re saying that you did not try to hurt yourself?”
Veteran: “Yeah.”
BEGIN WITH THESE 3 QUESTIONS:

1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful? (Refer to Key Terms on reverse side)
   If NO, proceed to Question 2
   If YES, proceed to Question 3

2. Is there any indication that the person had self-directed violence related thoughts?
   If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence \(\Rightarrow\) NO SDV TERM
   If YES, proceed to Decision Tree A

3. Did the behavior involve any injury or did it result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

DECISION TREE B: BEHAVIORS, WITHOUT INJURY
CASE EXAMPLE 3: A Veteran is being seen for a psychiatric evaluation. During the diagnostic interview, the clinician inquires about the Veteran’s history.

Therapist: “Have you ever hurt yourself on purpose?”
Veteran: “Long time ago.
Therapist: “Can you tell me about that?”
Veteran: “Well, it was a while ago, but I attempted suicide once.”
Therapist: “Can you say more about that?”
Veteran: “I tried to throw myself down a flight of steps.”
Therapist: “Tried to?”
Veteran: “Yeah. “
Therapist: “What prevented you from doing it?”
Veteran: “Well, I guess I didn’t actually try to. I just thought about doing it.”
Therapist: “So you had the urge or impulse, but didn’t actually do it?”
Veteran: “Right.”
Therapist: “I know you said it was a long time ago, but can you tell me about the circumstances that led up to that impulse?”
Veteran: It was a very long time ago, so it is hard to remember the details.
BEGIN WITH THESE 3 QUESTIONS:
1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful? (Refer to Key Terms on reverse side)
   If NO, proceed to Question 2
   If YES, proceed to Question 3
2. Is there any indication that the person had self-directed violence related thoughts?
   If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence ⇒ NO SDV TERM
   If YES, proceed to Decision Tree A
3. Did the behavior involve any injury or did it result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

DECISION TREE A: THOUGHTS

Were/are the thoughts suicidal?
Yes
No

If the thoughts were/are suicidal, is there evidence of Suicidal Intent?
Unknown
No
Yes

Non-Suicidal SDV Ideation

Suicidal Ideation, With Undetermined Suicidal Intent
Suicidal Ideation, Without Suicidal Intent
Suicidal Ideation, With Suicidal Intent
CASE EXAMPLE 4: Working with a depressed Veteran, you ask if she ever has thoughts of killing herself. She says, “Well, sometimes the thought pops into my head, but I would never do it because of my kids.”

BEGIN WITH THESE 3 QUESTIONS:
1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful?  
   If NO, proceed to Question 2  
   If YES, proceed to Question 3

2. Is there any indication that the person had self-directed violence related thoughts?  
   If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence → NO SDV TERM  
   If YES, proceed to Decision Tree A

3. Did the behavior involve any injury or did it result in death?  
   If NO, proceed to Decision Tree B  
   If YES, proceed to Decision Tree C

DECISION TREE A: THOUGHTS
CASE EXAMPLE 4: Working with a depressed Veteran, you ask if she ever has thoughts of killing herself. She says, “Well, sometimes the thought pops into my head, but I would never do it because of my kids.”

DECISION TREE A: THOUGHTS

Suicidal Intent: There is past or present evidence (implicit or explicit) that an individual wishes to die, means to kill him/herself, and understands the probable consequences of his/her actions or potential actions. Suicidal intent can be determined retrospectively and in the absence of suicidal behavior.
CASE EXAMPLE 5: A wife finds her husband tearful and holding a knife to his wrist. He has already made a few small cuts. On his bed is a note stating, “I can’t go on like this. You’ll be better off without me.”

BEGIN WITH THESE 3 QUESTIONS:

1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful? (Refer to Key Terms on reverse side)
   - If NO, proceed to Question 2
   - If YES, proceed to Question 3

2. Is there any indication that the person had self-directed violence related thoughts?
   - If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence \( \rightarrow \text{ NO SDV TERM } \)
   - If YES, proceed to Decision Tree A

3. Did the behavior involve any injury or did it result in death?
   - If NO, proceed to Decision Tree B
   - If YES, proceed to Decision Tree C
CASE EXAMPLE 5: A wife finds her husband tearful and holding a knife to his wrist. He has already made a few small cuts. On his bed is a note stating, “I can’t go on like this. You’ll be better off without me.”

3. Did the behavior involve any injury or did it result in death?
   *If NO, proceed to Decision Tree B*
   *If YES, proceed to Decision Tree C*
CASE EXAMPLE 5: A wife finds her husband tearful and holding a knife to his wrist. He has already made a few small cuts. On his bed is a note stating, “I can’t go on like this. You’ll be better off without me.”

Did the behavior involve any injury or did it result in death?
If NO, proceed to Decision Tree B
If YES, proceed to Decision Tree C
CASE EXAMPLE 5: A wife finds her husband tearful and holding a knife to his wrist. He has already made a few small cuts. On his bed is a note stating, “I can’t go on like this. You’ll be better off without me.”

3. Did the behavior involve any injury or did it result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

DECISION TREE C: BEHAVIORS, WITH INJURY

- Was the injury fatal?
  - No
    - Was the behavior interrupted by Self/Other?
      - Yes
        - Is there evidence of Suicidal Intent?
          - Yes
            - Suicide Attempt, With Injury, Interrupted by Self/Other
CASE EXAMPLE 6: A 75-year-old veteran loses his wife to cancer. Within hours, he purchases ammunition for a handgun he has had for years and contacts his attorney asking to revise his will. His son asks him about these behaviors, and he refuses to answer, changing the subject.

BEGIN WITH THESE 3 QUESTIONS:

1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful? (Refer to Key Terms on reverse side)
   If NO, proceed to Question 2
   If YES, proceed to Question 3

2. Is there any indication that the person had self-directed violence related thoughts?
   If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence → NO SDV TERM
   If YES, proceed to Decision Tree A

3. Did the behavior involve any injury or did it result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C
CASE EXAMPLE 6: A 75-year-old veteran loses his wife to cancer. Within hours, he purchases ammunition for a handgun he has had for years and contacts his attorney asking to revise his will. His son asks him about these behaviors, but he changes the subject.

3. Did the behavior involve any injury or result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C
Key Concept
Preparatory Behavior

Preparatory: Acts or preparation towards engaging in Self-Directed Violence, but before potential for injury has begun. This can include anything beyond a verbalization or thought, such as assembling a method (e.g., buying a gun, collecting pills) or preparing for one’s death by suicide (e.g., writing a suicide note, giving things away).

4:00 p.m.  5:00 p.m.  6:00 p.m.  8:00 p.m.

preparatory behaviors

a self-harm or suicidal behavior occurs
CASE EXAMPLE 6: A 75-year-old veteran loses his wife to cancer. Within hours, he purchases ammunition for a handgun he has had for years and contacts his attorney to revise his will. His son asks him about these behaviors, but he changes the subject.

3. Did the behavior involve any injury or result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

DECISION TREE B: BEHAVIORS, WITHOUT INJURY

Key Terms (Centers for Disease Control and Prevention)

Suicidal Intent: There is past or present evidence (implicit or explicit) that an individual wishes to die, means to kill him/herself, and understands the probable consequences of his/her actions or potential actions. Suicidal intent can be determined retrospectively and in the absence of suicidal behavior.
CASE EXAMPLE 6: A 75-year-old veteran loses his wife to cancer. Within hours, he contacts his attorney to revise his will. His son asks him about these behaviors, but he changes the subject.

3. Did the behavior involve any injury or result in death? 
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

DECISION TREE B: BEHAVIORS, WITHOUT INJURY

NOW SUPPOSE: The veteran never purchased the ammunition

Key Terms (Centers for Disease Control and Prevention)

Suicidal Intent: There is past or present evidence (implicit or explicit) that an individual wishes to die, means to kill him/herself, and understands the probable consequences of his/her actions or potential actions. Suicidal intent can be determined retrospectively and in the absence of suicidal behavior.
CASE EXAMPLE 6: A 75-year-old veteran loses his wife to cancer. Within hours, he contacts his attorney to revise his will. His son asks him about these behaviors, but he changes the subject.

3. Did the behavior involve any injury or result in death?
   If NO, proceed to Decision Tree B
   If YES, proceed to Decision Tree C

NEW UPDATE: One week later, the veteran is deceased from a self-inflicted gunshot wound.
CASE EXAMPLE 6: A 75-year-old veteran loses his wife to cancer. Within hours, he purchases ammunition for a handgun he has had for years and contacts his attorney to revise his will. His son asks him about these behaviors, but he changes the subject. One week later, the veteran is deceased from a self-inflicted gunshot wound.
REVISITING FIRST CASE EXAMPLE: A healthy 24-year-old female Veteran is brought by her boyfriend to the Emergency Department after she ingested all remaining pills in a bottle of regular strength Tylenol. She estimates there were 4 to 6 pills total in the bottle (1300-1950 mg total dose), and she reports no ill effects. Lab tests done at the time of admission to the ED reported her acetaminophen level within the therapeutic range. During triage, she states that before she took the pills she was upset from arguing with her boyfriend and just wanted to die. She feels better now and requests to go home.

BEGIN WITH THESE 3 QUESTIONS:

1. Is there any indication that the person engaged in self-directed violent behavior that was lethal, preparatory, or potentially harmful?  
   (Refer to Key Terms on reverse side)  
   If NO, proceed to Question 2  
   If YES, proceed to Question 3

2. Is there any indication that the person had self-directed violence related thoughts?  
   If NO to Questions 1 and 2, there is insufficient evidence to suggest self-directed violence → NO SDV TERM  
   If YES, proceed to Decision Tree A

3. Did the behavior involve any injury or did it result in death?  
   If NO, proceed to Decision Tree B  
   If YES, proceed to Decision Tree C
REVISITING FIRST CASE EXAMPLE: A healthy 24-year-old female Veteran is brought by her boyfriend to the Emergency Department after she ingested all remaining pills in a bottle of regular strength Tylenol. She estimates there were 4 to 6 pills total in the bottle (1300-1950 mg total dose), and she reports no ill effects. A Vet is drinking near a lake with a group of friends on Labor Day. On a dare, he and his old Army buddy decide to play Russian Roulette with a loaded gun. The Vet puts the gun to his head, pulls the trigger, and dies instantly from a gunshot wound to the head.
A Vet is **drinking** near a lake with a group of friends on Labor Day. **On a dare,** he and his old Army buddy decide to play Russian Roulette with a loaded gun. The Vet puts the gun to his head, pulls the trigger, and dies instantly from a gunshot wound to the head.
Key Elements in Decision-Making

✓ Is there any indication that the person engaged in SDV **behavior**, either preparatory or potentially harmful? N/Y

✓ Is there any indication that the person had SDV related **thoughts**? N/Y

✓ Was the behavior **preparatory** only? N/Y, N/A

✓ Did the behavior involve any **injury or death**? N/Y, N/A

✓ Was the behavior **interrupted**? N/Y, N/A

✓ Is there evidence (implicit/explicit) of suicidal intent? N/Y, Undetermined
A Vet with no history of suicidal behavior points the tip of a hunting knife against his bare chest but, as he begins to apply pressure, decides not to go any further, and calls the VA Crisis Line. When asked why he did this, he repeatedly answers, “Gee, I don’t know why.”

✓ Is there evidence (implicit/explicit) of suicidal intent? N/Y, Undetermined
During a crisis call, a Vet reports she has been feeling depressed and hopeless. The VA Crisis Line responder asks if she ever has thoughts of killing herself. She answers, “Well, sometimes I think it would be better if I weren’t here, but I never really talk to anybody about it, until now. I don’t think that I would ever act on those ideas, I just think about it sometimes and it frightens me.”
During a crisis call, a Vet reports she has been feeling depressed and hopeless. The VA Crisis Line worker asks if she ever has thoughts of killing herself. She answers, “Well, sometimes I think it would be better if I weren’t here, but I never really talk to anybody about it, until now. I don’t think that I would ever act on those ideas, I just think about it sometimes and it frightens me.”
Key Elements in Decision-Making

✓ Is there any indication that the person engaged in SDV behavior, either preparatory or potentially harmful?  N/Y

✓ Is there any indication that the person had SDV related thoughts? N/Y

✓ Was the behavior preparatory only? N/Y, N/A

✓ Did the behavior involve any injury or death? N/Y, N/A

✓ Was the behavior interrupted? N/Y, N/A

✓ Is there evidence (implicit/explicit) of suicidal intent? N/Y, Undetermined
Despondent, depressed and angry, a Vet calls the Crisis Line to say that he fashioned a noose out of a piece of rope, climbed up on top of a footstool, and tied the noose around a beam in his garage. As he jumped, the rope broke, and he fell to the ground without sustaining any injuries. He now calls to say that he is frustrated that no matter what he does, he can’t do it right.

Despondent and depressed over a recent job loss, a female Vet blames herself for getting fired. She begins ruminating about her poor attitude and attendance record. Trying to take her mind off of these bothersome thoughts, she holds a lit cigarette to her arm, and calls the Crisis Line. The responder gets her to take the cigarette off her skin and throw it away, but not before blistering has occurred.

A Vet who lives alone often drinks to the point of blacking out. After a recent episode, he wakes up next to his gun and realizes a shot had been fired. He has no injuries and no recollection of any events from the night before. He does, however, realize that he used his cell phone to text, “I hope it doesn’t hurt,” to several friends.

Feeling bullied by her partner about losing weight, a female Vet calls the VA Crisis Line to get some support and feedback. She tells the responder that she recently imagined how sorry her partner would feel if she stopped eating altogether and ended up in the hospital.
Feeling bullied by her partner about losing weight, a female Vet calls the VA Crisis Line to get some support and feedback. She tells the responder that she recently imagined how sorry her partner would feel if she stopped eating altogether and ended up in the hospital.
Key Elements in Decision-Making

- Is there any indication that the person engaged in SDV behavior, either preparatory or potentially harmful?  N/Y

- Is there any indication that the person had SDV related thoughts?  N/Y

- Was the behavior preparatory only?  N/Y, N/A

- Did the behavior involve any injury or death?  N/Y, N/A

- Was the behavior interrupted?  N/Y, N/A

- Is there evidence (implicit/explicit) of suicidal intent?  N/Y, Undetermined
