Addressing Mental Health Needs of Aging Veterans in Rural Communities

Presentation for: VISN 20 MIRECC Presents
Presented by: Bret Hicken, PhD, MSPH
Date of briefing: April 20, 2022
Vision: America’s Veterans thrive in rural communities

Mission: Improve the health and well-being of rural Veterans through research, innovation, and the dissemination of best practices.

Resource Centers: Hubs of rural health care research, innovation, and dissemination
AIMS

• Identify key sociodemographic and health characteristics of older rural Veterans.

• Discuss challenges that older rural Veterans experience related to accessing mental health care.

• Review strategies for addressing access issues, including ethical challenges, related to access to mental health care in rural areas.
AGENDA

• What is rural?
• Describing rural, aging Veterans
• Challenges for accessing rural mental healthcare
• Strategies for improving access
What is Rural?
VHA DEFINITION OF RURAL

- **Urban Area**: Census tracts with at least 30 percent of the population residing in an urbanized area as defined by the Census Bureau.

- **Rural Area**: Land areas not designed as urban or highly rural.

- **Highly Rural Area**: Sparsely populated areas — less than 10 percent of the working population commutes to any community larger than an urbanized cluster, which is typically a town of no more than 2,500 people.
WHAT DOES “RURAL” MEAN TO YOU?

WHAT DOES “RURAL” MEAN TO YOU?

- Geographic Location?
- Population density?
- Economic variable?
- Voting constituency?
- Social determinant of health?
- Cultural identifier?
- Racial/ethnic make up?
- Values, beliefs, traditions?
- Environmental?

RURAL HEALTH

- Lower life expectancy at birth (77.4 vs 79.3)\(^3\)
- Higher mortality (per 100,000):\(^1\) (all p\(<\=0.01)\)
  - Unintentional injury (54.1% vs 36.6%)
- Higher rates of
  - Smoking (27% vs 17.9%)\(^2\)
  - Obesity (35.7% vs 29%)\(^2\)
- Lower rates of
  - Physical inactivity (38.8% vs 30.9%)\(^2\)
  - Illicit drug use (16.6% vs 20.5% vs 22.0%)\(^4\)
- Mental illness rates similar to urban
  - Substance abuse rates similar (meth use \(~2x\) higher in rural)\(^4\)
  - Suicide (17.32 [rural] vs 14.86 [Medium/small metro] vs 11.92 [large metro])\(^6\)*
- More likely to experience \(\geq 4\) adverse childhood experiences (10.7% vs 6.8%, p\(<0.0001)\(^5\)

\(^*\) per 100,000 population

Teich, Ali, Lynch, & Mutter, 2017
Challenges to Accessing Mental Health Care
STRUCTURAL URBANISM

- “Elements of the current public health and health care systems that disadvantage rural communities”
- Bias toward large population centers
  - Healthcare is a market
  - Public health focus
  - Rural inefficiencies
- Infrastructure, Transportation, Connectivity, Reimbursement, Providers, Training
ACCESS TO MENTAL HEALTHCARE

- Availability
- Accessibility
- Acceptability
- Affordability
- Accommodation

Penchansky & Thomas, 1981; Karikari-Martin, 2010
AVAILABILITY-MENTAL HEALTH PROFESSIONALS

- 58% of Mental Health Professional Shortage Areas are in rural areas\(^2\)

% Counties without a Mental Health Provider\(^1\)

1. 0% 20% 40% 60% 80% 100%
2. Series1
3. Series2
4. Series3

\(^1\)Andrilla, Patterson, Garberson, Couthard, & Larson, 2018; \(^2\)Health Resources Services Administration, 2021
AVAILABILITY-RURAL MENTAL HEALTH PROVIDERS

- Multiple relationships, conflicting roles
- Incidental encounters
- Altered therapeutic boundaries
- Fears about confidentiality/privacy
- Cultural dimensions of mental health care
- Always “on the job”
- Self-disclosure

- Competencies and scope of practice
- Generalist care and multidisciplinary team issues
- Limited consultation about ethical issues
- Stresses experienced by rural mental health providers

Helbok, 2003, Werth et al., 2010
ACCESSIBILITY-DISTANCE TO CARE

- 15% of VA medical centers are in rural areas\(^2\)
- Distance is a common barrier for accessing mental health care among rural residents\(^1\)
  - 88% of VHA-users eligible for VA Choice care were rural\(^4\)
- Rural residents more reliant on personal vehicles for transportation\(^3\)
  - 90% of rural travel is via personal vehicle (urban = 65%)
  - .5% rural residents use public transportation (6.3% = urban)

1Brenes, Danhauer, Lyles, Hogan, & Miller, 2015; 2Cowper Ripley, Ahern, Litt, & Wilson, 2017; 3Mattson & Dilip, 2020; 4Ohl et al., 2018
AFFORDABILITY-HEALTH CARE COVERAGE

- 2020 Farm Bureau Poll\(^1\)—Cost is the greatest barrier to mental health treatment (73%)
  - Stigma (60-63%)
  - Availability (59-63%)
  - Accessibility (61-63%)
  - Embarrassment (59-66%)

<table>

</tr>
</tbody>
</table>

1 American Farm Bureau Federation, 2020, 2Holder, 2016, 3VHA Office of Rural Health, 2018
ACCEPTABILITY-RURAL CULTURE

Rural communities are heterogenous and complex

- Commitment to family
- Self-reliance
- Distrust of outsiders and institutions*
- Reluctance to share personal problems
- Stoicism/fatalism (acceptance)*
- Church/community ties*
- Conventional behavioral expectations
- Traditional gender and generational role expectations
- Resistance to change
- Respect for authority (poor self-advocacy)
- Conflict avoidant
- Self-abnegation (resistance to “self-esteem”--pride)

Bennett et al., 2011, Helbok, 2003, Rainer, 2010, Slama, 2004; Wang et al., 2003, Werth et al., 2010; Fischer et al, 2021
ACCEPTABILITY-VETERAN ETHOS

- Interviews with 25 rural Veterans (4 states)—mean age=55 years
  - Self-reliance (not needing support from other people)
  - Stoicism (endurance of pain or hardship without complaint)
  - Resisting treatment-seeking until it becomes unavoidable
  - Stigma (negative attitudes toward mental health treatment)
  - Lack of trust in the VA health care system

- 2021 Study (telephone interview with 752 Veterans)
  - Higher levels of mistrust of others
  - Emotional stoicism
  - Belief in the self-resolving nature of mental health problems
  - Belief in the efficacy of religious counseling for such problems
  - NOT geographic location

(Fischer et al., 2016; Fischer et al, 2021)
ACCOMMODATION-MEETING RURAL VETERANS’ NEEDS

- Ease of getting appointments
- Office hours
- Waiting times
- System navigation

Penchansky & Thomas, 1981
Strategies for Addressing Access
CREATE ACCESS OPTIONS

▸ Telemental Health
  ▸ Learn to use VVC and offer it as an option to Veterans

▸ Mobile apps
  ▸ Learn what they are and how to integrate them into care

▸ Primary Care Mental Health Integration
  ▸ Learn to communicate/consult with primary care providers

▸ Partnered Programs
  ▸ Learn about community and VA resources and refer
CONSIDERATIONS FOR TELEHEALTH WITH OLDER ADULTS

▸ Technology proficiency and availability
  ▸ 75% use the internet and many studies show wide availability.
    ▸ Proficiency varies based on education, skill, acceptance of technology.

▸ Physical and cognitive limitations
  ▸ Adaptations can accommodate limitations.
    ▸ Remind patients to use hearing aids and glasses.
    ▸ Coach patients to use accessibility features such as contrast settings.
    ▸ Use assistive technologies such as screen magnifiers.

1Padala et al., 2020; Pew Research Center, 2020; 2Nieman, 2020; Steinman, Perry, & Perissonotto, 2020
"It's just more-genuine. I'm getting care and I can see my provider. They aren't just a phone call like a telemarketer. A lot of communication with people is non-verbal so seeing them helps out with that.”

“It builds a connection. You can put a face to the voice, it gives you a sense of comfort when you’re talking to someone. You lower you guard. Both parties become more empathetic.”

Slide Courtesy of Jan Lindsay, PhD
RURAL AS A DIVERSITY FACTOR

The more we recognize the complexity of human experience and identity, the more able we are to understand and build a positive therapeutic alliance… calling attention to multiple identities and contexts…helps therapists avoid inaccurate generalizations on the basis of characteristics such as the person’s physical appearance, name, or language [or place of residence].
# ADAPT TREATMENT-RURAL AS A DIVERSITY FACTOR.

Slama, 2004; Smalley et al., 2010
ADAPTING CARE FOR RURAL VETERANS

- Address self-stigma in therapy\(^3,4\)
- Understand rural culture and world-view\(^4\)
- Use motivational interviewing techniques\(^2\)
- Greater focus on behavioral activation\(^1\)
- Acknowledge and respect of religious beliefs\(^1\)
- Incorporate religious practices into behavioral activation\(^1\)
- Systems approach\(^4\)
- Make use of client’s natural resources (e.g., family, church, and other nonprofessional supports)\(^2\)
- Be flexible with scheduling (location and frequency)\(^1\)
- Know key programs (VA/community)

\(^1\)Crowther et al, 2010; \(^2\)Helbok et al., 2006; \(^3\)Larson et al, 2010; \(^4\)Smalley et al., 2010
FOR MENTAL HEALTH PROVIDERS IN RURAL AREAS

▸ Know the ethics code (be ready to adapt)\(^2\)
▸ Know the local culture
▸ Become involved in the community to engender trust (be selective)\(^2\)
▸ Involve client in decision-making
▸ Awareness of relationships—talk to client about:\(^2,3\)
  ▶ Informed consent
  ▶ Disclosure and confidentiality
  ▶ Dual relationships/incidental encounters
  ▶ Clear boundaries and expectations
▸ Remember that MH provider is often part of the client’s system.\(^1,3\)
▸ Consider problem severity when determining which clients to see\(^3\)
▸ Discuss confidentiality/privacy (individually and with groups)\(^2\)
▸ Seek supervision/support/consultation.\(^1\)
▸ Self-care to avoid burnout.\(^2\)
